DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-5 and 7-15 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

3. Claim 1, lines 14-18, recitation of "once the gas discharge in the high-pressure discharge lamp (La) has been started, brings about at least partial compensation of the inductance of the starting transformer (TI) if the lamp current is flowing through the secondary winding (LIb)." lacks detailed support from the specification in term of a numerical value of the inductance or how to determine/measure in a specific inductance value that partially compensates lamp current flow in the discharge lamp.

4. Claims 2-5, 7 and 9-15 are rejected due to their virtual dependency on the defective claims 1 and 8.

Allowable Subject Matter

5. Claims 6, 13, 16 and 17 are allowed.
6. The following is a statement of reasons for the indication of allowable subject matter: the prior fails to establish a circuit for operating a discharge lamp in a manner as described in which a connection arranged for the discharge lamp and a secondary winding of a starting transformer of a pulse start device in that at least one capacitor, connected in series with the secondary of the starting transformer in a such manner that represent s a short circuit for the starting pulse generated by a pulse starting device and the capacitor is charged, before the gas discharge in the lamp started, to a DC voltage as required in claims 6 and 13.

Citation of pertinent prior art

7. The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.

Maksymilian (US Pat. 3,555,352) discloses gas discharge lamp operating system.

Nagase et al. (US Pat. 4,912,374) discloses discharge lamp driving circuit.
